## **Motormouse**

### **Instructions for re-booting**

1. Remove batteries from mouse.
2. Remove receiver from PC/Laptop and leave for one minute.
3. Replace batteries (correct way round) and leave trunk open.
4. Replace receiver into USB port on PC/Laptop.
5. Close trunk. Wait for red light to flash under the car and red light bar to flash on receiver.
6. Press both the left and right click buttons together until headlights flash. Release both buttons.
7. Repeat this process three times to take the mouse through all 3 sensitivity settings.
8. Left click once.

This should re-boot the entire system and you should now be able to move your cursor on the screen. If you still have difficulties or have any other issues please e-mail us at:
